

Perfectly correct addresses to support your business processes.

ABOUT 365 business Address Validation:

Check and complete your address data in Microsoft Dynamics 365 Business Central. Use 365 business Address Validation to make sure you reach your customers and leads.

WHAT WE OFFER

Various address databases enable the secure checking and completion of your address data from all over the world.

The detailed, often house number-accurate address comparison ensures a high quality of your address data.

The information from the address databases is made available through the 365 business API Cloud Services.

You do not need to update or maintain large address databases and always receive the most current information.

Direct integration with Microsoft Dynamics 365 Business Central business processes simplifies use and reduces the additional work involved in data maintenance and collection.

Make sure that you really reach your leads and customers!

Increase your sales opportunities and avoid undeliverable information, quotes and offers.

WHAT OUR CUSTOMERS SAY:

“With the help of the 365 business API address validation service, we have been able to clean up hundreds of incorrect and incomplete addresses in our address database. As a result, we now save money on every marketing campaign!”

Microsoft Dynamics 365

Use the familiar environment of Microsoft Dynamics 365 Business Central to verify and complete your address data.

KEY USE CASES

SALES

Make sure that you really reach your customers and that your offers and promotions reach the right recipient.

MARKETING

Reach your leads and contacts to generate new sales opportunities. No longer let your marketing efforts go to waste.

COSTS

Reduce unnecessary costs for incorrect or undelivered shipments.

INTUITIVE

Intuitive integration with Microsoft Dynamics 365 Business Central allows any user to perform address validation.

WHY 365 BUSINESS ADDRESS VALIDATION

Address validation & completion is offered through the 365 business API and provides you with up-to-date, worldwide address data for validation without the need to maintain your own address databases.

The billing system is **transaction based**, starting at 0.17 Euro per address check, and you only pay for the actually checked address data when you do it!

Comparable address databases cost you around 1,000.00 euros per year.

Direct integration with **Microsoft Dynamics 365 Business Central** allows your employees to maintain addresses without additional effort.

Additional training or instruction in the use of the address check is not necessary.

The integration into business processes, for example the entry of sales offers, supports your employees and reduces errors caused by transmission errors such as typing, reading, hearing or typing errors.
